

Haganis Industrial floor

Location: Metz, France

Date: 2013

Contractor: Freyssinet

Solution and technologies: Overlay

Introduction

Haganis waste discharge area needed to gain resistance to aggressive environments: chemicals, abrasion and waterproofing deficiency. A slab strengthening solution as been implemented to allow more than 300 dump trucks circulate daily on this slab since the repair works.

Challenge

The team had to face multiple issues of chemical aggressiveness, mechanical abrasion and waterproofing of the floor on this project. In 2013, Ductal® Overlay solution has been implemented on a raft in an unloading area of the Haganis company in Metz. More than 300 dump trucks circulate and maneuver daily on this slab since the repairs. All the waste is handled by a loader that constantly scrapes the ground.
